AFTER a rigorous round of judging, nine professional entrants, including three individuals and six teams, were honored with the SZ-DAY Merit Awards for their originality, innovation and contributions to economic recovery and better lives.

# Merit Award winners

## Berlin

"Enfant gâté" is a starter kit for newborns. The collection includes eight essential items babies need for a start in their lives, including a sleep suit, a sleeping bag, a cuddly toy, a receiving blanket and other necessities.

Enfant gâté is a popular French term for "spoiled and loved child." Developed in cooperation with a local maternity clinic, the garments, made of 100 percent organic cotton, free of carcinogenic dyes and other harmful substances, are hand-sewn with traditional sewing machines in Germany.

The products are very soft, use breathable and moisture-regulating cotton and have intelligent patterns that function without buttons, zips or other hard materials.

Ability Bib

## Kobe

"Ability Bib" is a tool for volunteers and victims in a disaster to announce the skills that they have, thereby promoting responsible action and smooth communication with victims.

"Stress Mountain," based on an advanced diagnostic system of medical knowledge, is a web service for diagnosing the quantity of accumulated stress and possibility of onset depression in order to propose suitable counter-measures to help prevent suicide.

"Community Travel Guide" is a guidebook that allows encounters with people who live the unique Fukui life. By including 392 local Fukui people, the book proposes a new style of trip, which not only obtains deep knowledge and experiences, but also makes bonds with people.

Original Green Cup

## Montreal

"Borneo," installed on regular water hydrants, is a device that provides fresh water in outdoor spaces with four drinking spouts at different heights to make the water accessible to adults, children or people with mobility impairments.

One of the two structural arms contains a one-way valve that allows water to flow into the system while the main water supply remains available to fire departments. The adjustable installation angle allows for good ergonomics with variable hydrant heights.

Any drinking spout can be replaced by a spray nozzle for water games. One spout facing down can be used to refill bottles. The circular shape is inviting and gathers people together while keeping them safe from water splashes.

Borneo

Incredibox

Anchorage

Animali Domesticki

## Saint Etienne

"Anchorage" is a project to research design and territory with five anchored installations in deserted urban areas, which are developed in association with designers, inhabitants, local artisans and public establishments to bring out the qualities of specific places.

Created by Laure Bertoni and Sébastien Philibert, the awarded entrant refers to a "playground" at the intersection of two streets, consisting of a stone, a large floor, a long wooden bench and a wooden hut installed on a bulky tree, to discuss the relationship between towns and rural areas.

"Animali Domesticki," designed by Jean-sebastien Poncet, is a new collection of urban furniture inspired by the images of animals to demonstrate and investigate how rudimentary shapes can stimulate the imagination. Each animal is made up of a combination of parts of equal dimensions, which are cut at an angle of 30 degrees, 60 degrees or 90 degrees.

The pieces are made by welding steel square tubes with a special epoxy coating to improve the surface quality, and are given a warm mat finish for easy maintenance. Designed in accordance with urban furniture standards of safety, solidity and durability, they can be installed anywhere.

"Incredibox" is a musical application available online for free, based on the idea of inviting users around the world to become the conductor of a group of beat box performers in a few clicks. It allows everyone to express musicality through an interface by dragging a sound icon on animated characters to make them sing.

Several features revolve around this basic principle, such as the ability to make mutes or solos unlocking bonuses.

## Seoul

"Original Green Cup," developed by the Ecojun Company, is made from eco-friendly materials: biodegradable corn plastic with a "v" shaped crack on the top of the cup to prevent tea bags from slipping inside.

It is wrapped by a sleeve made of used burlap coffee bags, which reminds users of a takeout coffee cup and delivers a natural feeling. Designers used 100 percent used paper for packaging, and the package itself can serve as a saucer or a cup holder to minimize waste.

The product creates employment opportunities for handicapped people to develop self-reliance by involving them in the entire process of packing, while a portion of the profits will go to "Wells for Africa Campaign."

## Shenzhen

"Lotus Pool" is a book created by local designer Ren Sisi, which uses aluminum plating as the cover material and employs the oxidation process and laser engraving. The connection between cover and spine uses a new kind of metal structure.

"Textual Logic: Works by Wang Dongling, Qiu Zhenzhong and Xu Bing" is an interpretation of both the statement of calligraphy and the restraint of traditional culture.

## Shanghai

"Philips Solar Lamp," designed by Ding Wei, who founded Moma Company, is an innovative product that is both green energy and low-carbon that focuses on the needs of people who live in remote areas, such as parts of Africa. It has a solar energy board battery charger, which can provide power for three to eight hours, but is only the size of a AAA rechargeable battery.

The slim shape of the product reflects the aesthetic values of industrial design, and it blends the art design and green technology together with simple design language. In the lighting area, it adopts combination LED backlighting and a high transmittance acrylic board, which has tons of tiny holes in it.
